Size: A4 Date: Rev:
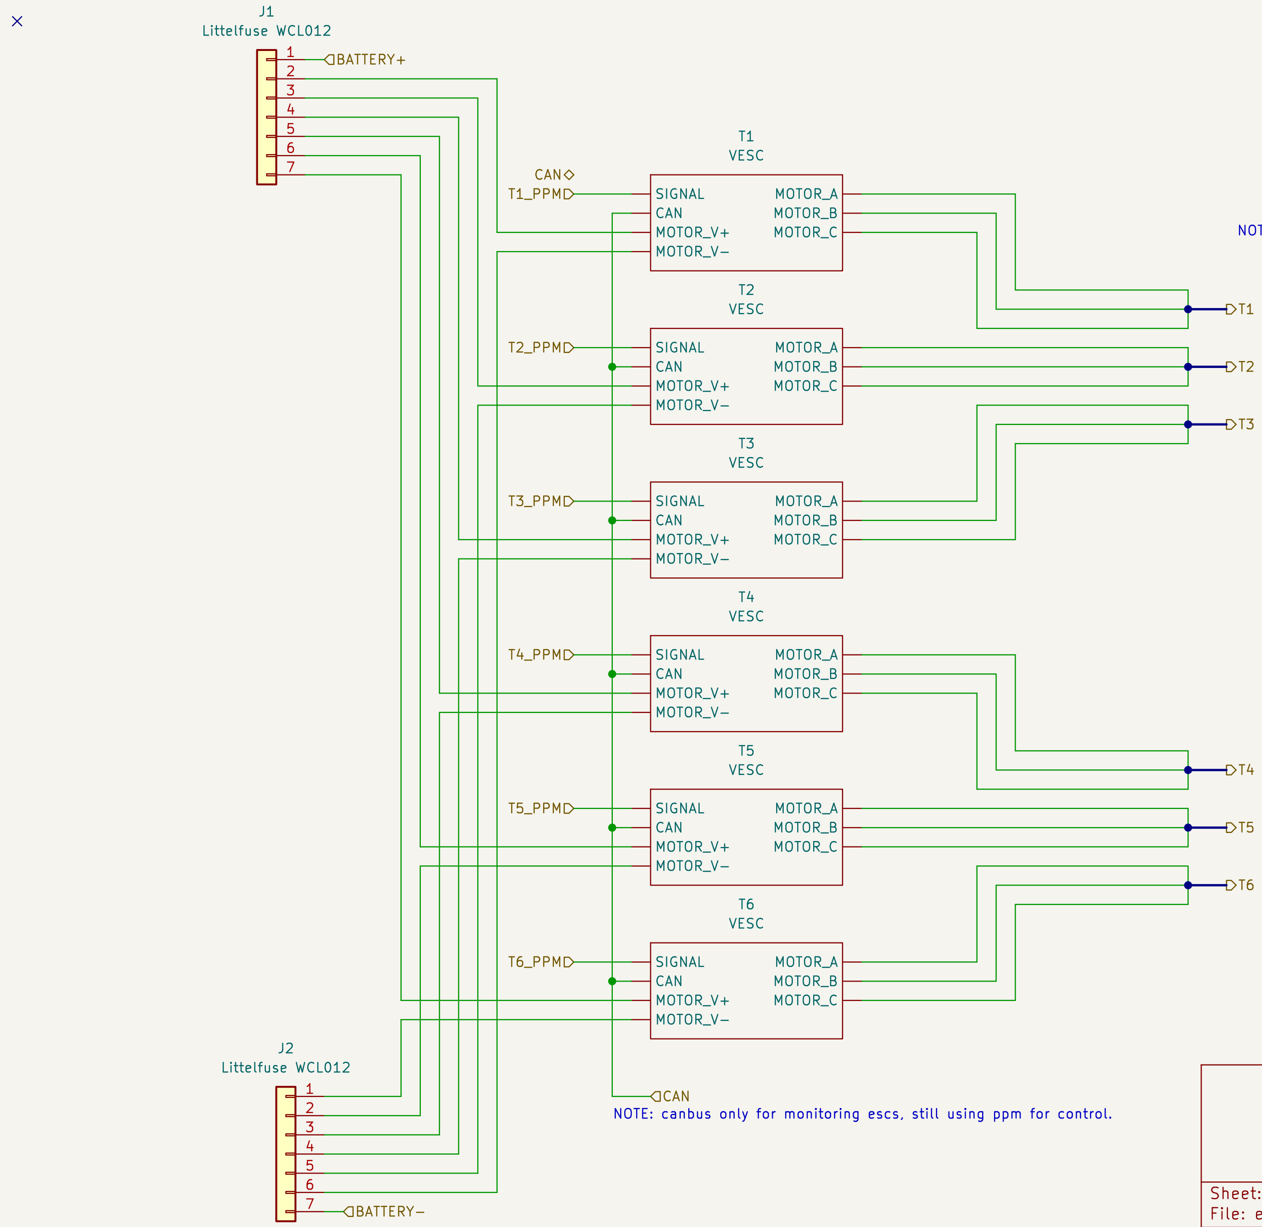
KiCad E.D.A. 8.0.7 Id: 4/8

NOTES:
- All escs are FLIPSKY Mini V6 MK5, with a custom heatsink to dump heat to the enclosure
- CAN will probably end up disconnected, but will be used for esc monitoring and control eventually.
- Make sure to save VESC parameters in git.



NOTE: Use blue robotics T500 thruster cable for all motors

NOTE: canbus only for monitoring escs, still using ppm for control.

Sheet: /control enclosure/escs/

Title:

Size: A4	Date:	**Rev:**
KiCad E.D.A. 8.0.7		Id: 5/8

NOTES:
- Need to supply ~140W max, ~50W power continuous
    50W @ 5V (raspberry pi + status lights)
    40W @ variable V (servo)
    30W @ 12V (strain gauge & dvl)

NOTE: There is a bit of a octopus running from the 12V and 5V power supplies for
    distribution, make a carrier board later

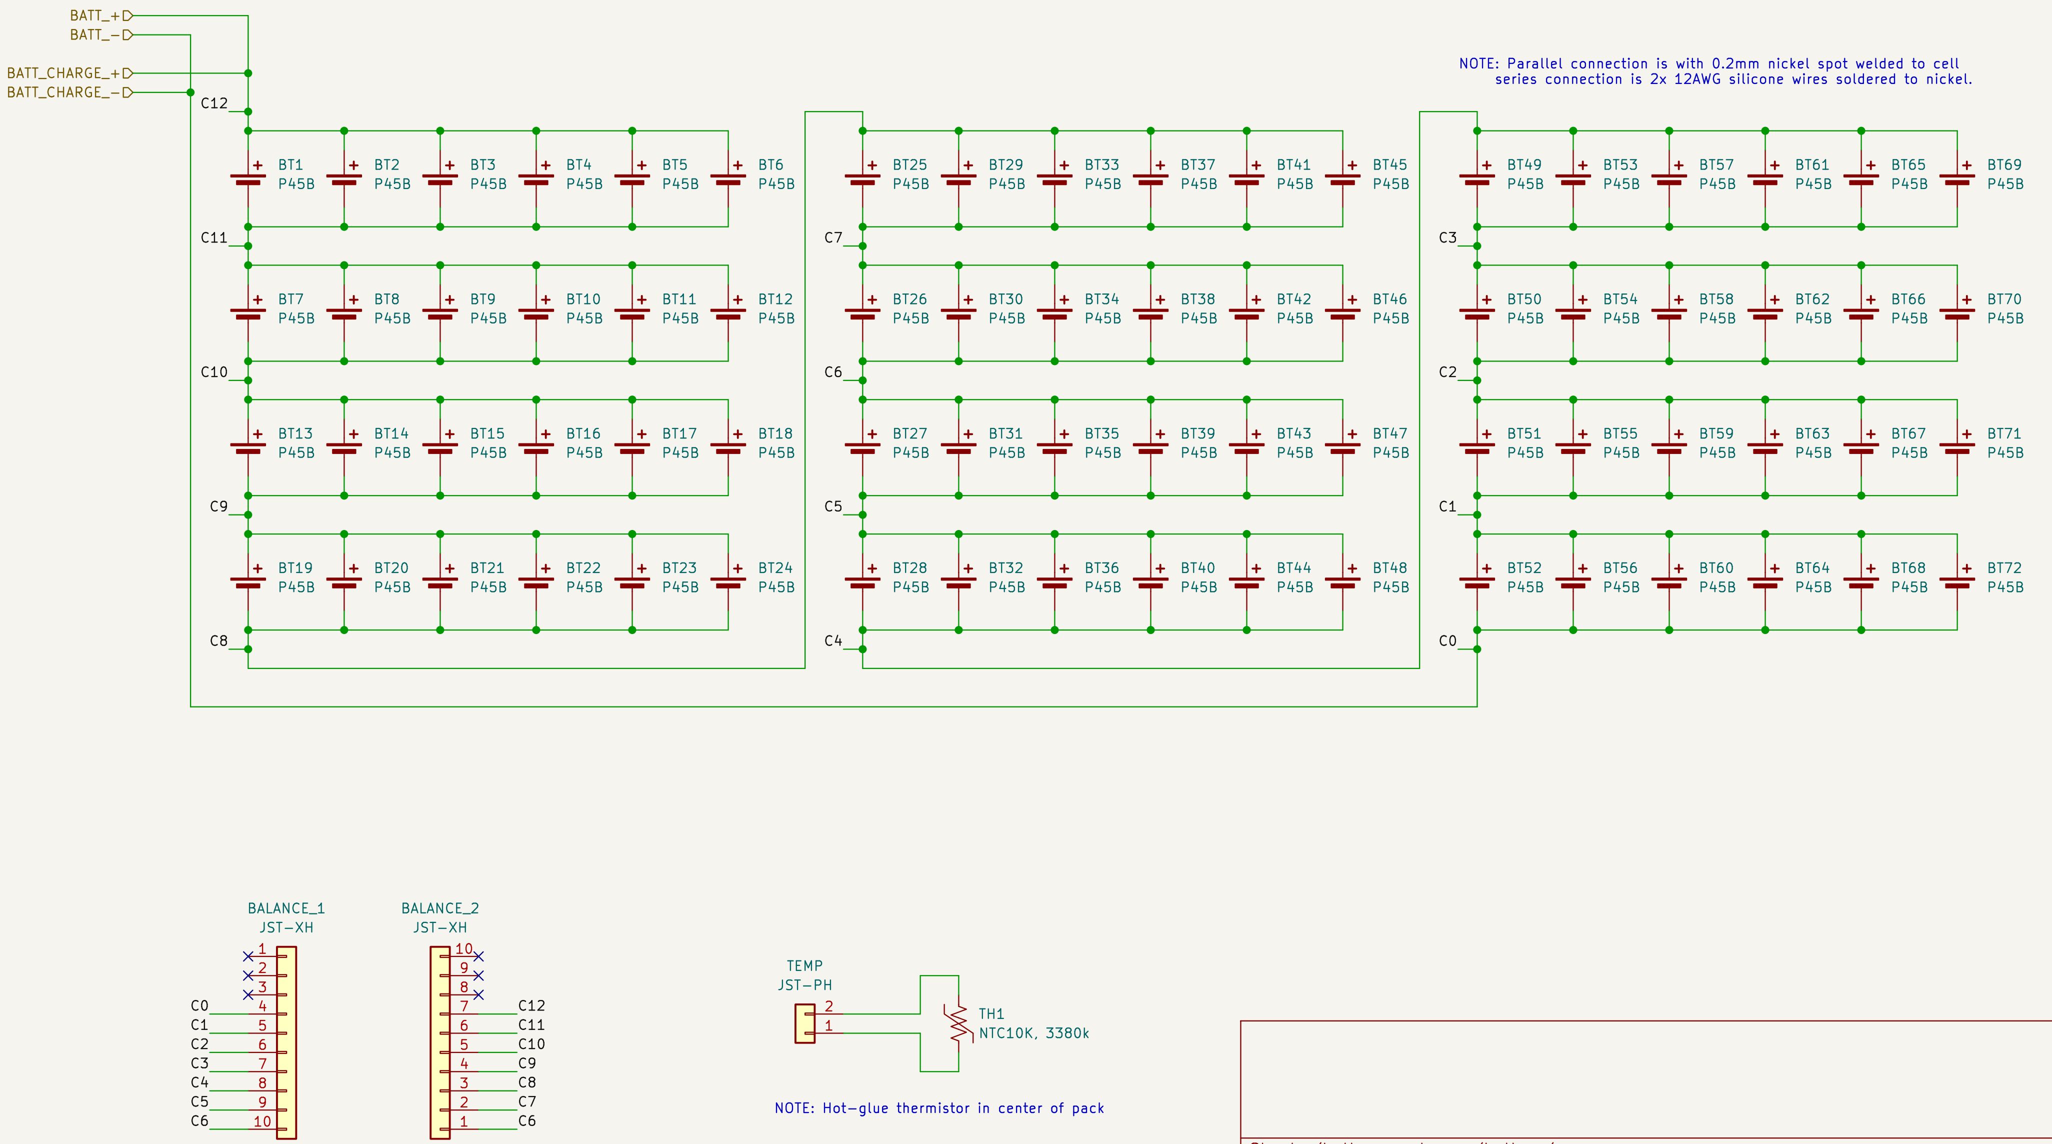
Size: A4	Date:		**Rev:**
KiCad E.D.A. 8.0.7			Id: 6/8



NOTE: Parallel connection is with 0.2mm nickel spot welded to cell
series connection is 2x 12AWG silicone wires soldered to nickel.

NOTE: Run two wires from pack for C6 balance lead

NOTE: Hot-glue thermistor in center of pack
